### Update the software (for early software versions)

 After connecting the system to your Wi-Fi network, it will update in 4 hours. A pop-up message will appear on the monitor when the update is completed. Select "Now" and reboot the system.

2. Now you can enjoy a more enhanced connection. After updating, the connection is set to router mode by default. Using router mode will allow you to receive future software updates when available.

#### Update the software (for recent software versions)

1. Press MENU key on your Parent Unit, and select "Software Update" on the setting tab.

For setting up the full range of your monitor's features scan here:

4. Check the status bar icons to make sure both Parent Unit and Baby Unit connect to the router.

If these icons are displayed on the Parent Unit, please place both the Parent Unit and Baby Unit closer to the router, then power off and on the Parent Unit and repeat **Steps 1-3**.
